

SafeWord™ PremierAccess™

*Manage all your users and access points with
one powerful access control solution*

Manage multiple access points and protect applications with a single product

SafeWord™ PremierAccess™ allows you to seamlessly manage user access to Web, VPN and network applications. With a single management console and user directory, PremierAccess lets you secure all your access points without the expense and complexity of integrating multiple systems from different vendors. PremierAccess integrates with all these applications: Web, VPN, Citrix®, Windows, remote dialup, UNIX, SSH, Oracle, Novell, and more.

Open e-business doors with the right access control system

Security used to mean locking the doors and assuming everyone was a threat. But e-business today requires that you welcome your remote customers, vendors, business partners, and employees—giving them easy, efficient, yet controlled access to your resources. PremierAccess is a cost-effective way to gain the appropriate level of security for your resources, while opening your doors for e-business.

Protect access to your Web resources

The unique Universal Web Agent provides authorized user access to a wide range of Web applications, allowing cross domain single sign-on, personalization of content, and session management. All this can be done without custom integration, regardless of the specific type or version of the Web server.

Strengthen VPN security

VPNs provide secure tunneling directly into the heart of your networks, making user authentication and authorization more important than ever. PremierAccess provides seamless authentication support for all major VPN vendors including Check Point, Cisco, Alcatel, Nortel and Microsoft.

Control who can go where—with personalized, role-based authorization

Identifying users is the first step, but it's equally important to control where they can go and what resources they can access. PremierAccess provides granular authorization based on a user's role or relationship to the organization. Users can also view personalized Web pages based on their specific roles.

Choose the right authenticators for the appropriate level of security

PremierAccess supports every authentication technology including passwords, tokens, digital certificates, smart cards, USB tokens, wireless devices, and biometrics. PremierAccess lets you match the strength of your authenticators with the security requirements of the resources being protected.

Unique Authentication Broker manages external directory systems

PremierAccess has the powerful ability to broker authentication to ActiveDirectory or RADIUS-based systems. This allows you to extend the access control and authorization capabilities of PremierAccess to your existing infrastructure.

Easy and practical to manage

PremierAccess is easy to deploy and manage with user-self enrollment, centralized or delegated administration, and help-desk functionality. The Web-based Enrollment Center allows administrators to create reservations—assigning roles and authentication methods—for groups of users. This allows the users to self enroll using a Web-based form.

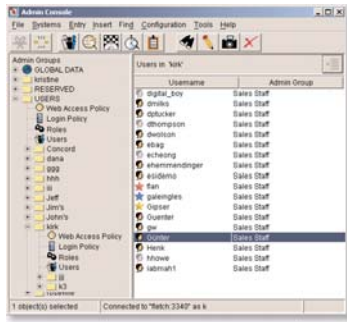

Advanced Deployment Capabilities

The PremierAccess Enrollment Center provides a powerful deployment platform with the ability to deliver digital certificates, software

Authentication + Authorization + Manageability = Access Control

- Manage all your access points with a single, integrated solution.
- Control who can go where—with flexible role-based authorization.
- Protect any Web server and provide single sign-on, personalization, and session management with the Universal Web Agent.
- Save time and money through Web-based user enrollment and deployment.
- Handle any number of users—from small pilots to millions.
- Use the Authentication Broker to extend authorization capabilities to your existing infrastructure, such as ActiveDirectory or legacy token systems.

SECURE
COMPUTING

Administration console: Easily manage users, roles, access policy, sessions, and authenticators from this central console. Administration and help-desk capabilities allow you to delegate support tasks according to your needs.

User enrollment screen: This Web-based enrollment system saves you time and money registering users, assigning authenticators, issuing digital certificates, and deploying client software.

VPN authentication

- Alcatel 7130 Secure VPN
- AT&T Global Network
- Certicom movianVPN
- Check Point VPN-1/Firewall-1
- Cisco Concentrator 5000 & Altiga 3000
- Microsoft Windows 2000
- Nortel Contivity
- SafeNet SoftRemote™
- Secure Computing Sidewinder VPN gateway
- SonicWALL VPN

Software Development Kits (SDKs)

- Administration
- Authentication
- SofToken II

Supported platforms

- Windows 2000
- Sun Solaris 7 and 8

tokens, and client software to end-users, saving enormous amounts of administrative time. This can be used in conjunction with Secure Computing's Token Deployment Service (TDS)

which provides fully automated programming, assigning, packaging, and delivery of hardware tokens directly to end-users or remote offices.

SafeWord™ PremierAccess™

Features	Benefits
Manage multiple access points <ul style="list-style-type: none"> Seamless integration and interoperability with Web, VPN, Citrix, Windows, dialup, UNIX, SSH, Oracle, Novell and more. 	Manage multiple access points <ul style="list-style-type: none"> Leverage your existing infrastructure and manage user access to all your applications with a single product.
Universal Web Agent <ul style="list-style-type: none"> Protect any and all types of Web servers without customization. Provide single sign-on capabilities across domains, personalize content, and manage user sessions. 	Universal Web Agent <ul style="list-style-type: none"> Protect your resources awhile personalizing user access and providing the convenience of single sign-on.
Strengthen the security of VPNs <ul style="list-style-type: none"> Add user authentication and authorization to VPN connections. Supports VPNs from all major vendors including Alcatel, Certicom, CheckPoint, Cisco, Nortel, and Microsoft. 	Strengthen the security of VPNs <ul style="list-style-type: none"> VPNs create a secure tunnel into your network, making PremierAccess's ability to positively identify users and authorize where they can go even more important.
Authentication options <ul style="list-style-type: none"> Supports passwords, dynamic password tokens, smart cards, USB-tokens, biometrics, and wireless and PC device authentication. Embedded PKI capabilities and unique Virtual Smart Card server allow you issue x.509 digital certificates or use certificates from all major PKI vendors. Authentication Broker to ActiveDirectory and RADIUS systems. 	Authentication options <ul style="list-style-type: none"> Map the strength of each authenticator to the security required for each protected resource. Virtual Smart Card server provides mobility and security without additional hardware expense. Brokered authentication lets you extend authorization capabilities to users in external systems.
Role-based authorization <ul style="list-style-type: none"> Control who can go where with flexible authorization capabilities. Create roles that reflect your users' relationship(s) to your organization. Manage all your access control rules with powerful ACLs (access control lists). Create comprehensive access rules that include roles, IP addresses, time-of-day and authentication strength. 	Role-based authorization <ul style="list-style-type: none"> Provide fine-grained control of each user's—or group of users—access rights. The powerful role-based system allows you to create multiple access rules, assign them to roles and assign multiple roles to various users. This provides a powerful and flexible way to manage and enforce your organization's access policy.
Manageability and ease of use <ul style="list-style-type: none"> Web-based enrollment server with self-registration capabilities. Deployment platform for client software and SofToken II. Manage distributed users from a central location. Real-time mirroring to multiple servers. 	Manageability and ease of use <ul style="list-style-type: none"> User self-enrollment dramatically reduces the time and expense of adding new user accounts and deploying client software and software-based tokens. And count on your resources being safe 24x7 with PremierAccess mirroring capabilities.
Industry standards compliance <ul style="list-style-type: none"> LDAP v2/v3 PKIX-RFC 2459 RADIUS Microsoft CryptoAPI PKCS #11 SSL 	Industry standards compliance <ul style="list-style-type: none"> Protects your investments in existing equipment through standards-based interoperability and compatibility.
