

“One of the best things about Websense is its continued investment in innovative security. I honestly can’t imagine what our security posture would be like if we didn’t have products backed by the Websense ThreatSeeker Network, which is the best set of security categorization and detection technologies we have seen available on the market.”

Beth Cannon

Chief Security Officer
Thomas Weisel Partners

Websense Hosted Web Security

Today’s Internet threats are more invasive and abundant than ever before, and the nature of attacks is constantly changing. In fact, according to Websense® research, over 60 percent of the top 100 sites either hosted malicious content or contained a masked redirect to an illegitimate site. Websense understands both the content and the context of the Internet landscape through its industry-leading Web security protection. Websense Hosted Web Security provides centralized Web malware, spyware, and antivirus protection as well granular Internet filtering—all with a hosted deployment model that provides centralized management for any type of environment, including those with remote employees or distributed office locations.

Organizations can deploy Websense Hosted Web Security as an independent hosted solution, or as a complementary component of layered Web protection with on-premise Websense Web Security. Backed by industry-leading service level agreements (SLAs), Websense Hosted Web Security reduces business complexities and saves time and expenses.

Websense is the established global leader in Web security. Backed by our proprietary Websense ThreatSeeker™ Network, Websense Hosted Web Security leverages the technology trusted by thousands of businesses worldwide to provide a hosted model for Web security—with no software, hardware, installation, or maintenance required onsite.

Websense Hosted Web Security provides centralized Web malware protection and granular Web filtering.

The Websense Hosted Web service centralizes Web protection across multiple gateways, locations, and roaming user sites, eliminating the need for additional servers or administrative overhead at remote locations.

How It Works

Acting as a proxy, Websense Hosted Web Security proactively discovers and blocks threats at the Internet level and helps enforce employee Internet usage with no need to deploy on-premise equipment. The service is easy to deploy for organizations of all sizes and provides high availability with Websense global data centers,

which are load-balanced, highly available clusters positioned in 10 locations worldwide.

Websense data centers are certified to ISO 27001 standards, providing standards for the highest degree of security, privacy, and confidentiality—backed by industry-leading SLAs to ensure uptime and availability.

Websense ThreatSeeker Network

The Websense ThreatSeeker™ Network adaptive security technology uses more than 50 million real-time data collecting systems that continuously monitor Internet content—including new and dynamic content—for zero-hour protection from emerging threats. This research and intelligence is fed, in real-time, to the Websense solutions portfolio. As a result, Websense is able to adapt to the rapidly changing Internet at speeds not possible by traditional security solutions.

Summary

Websense Hosted Web Security provides protection at the Internet level, ensuring a productive and malware-free environment for employees using the Internet.

- Reduce business complexities and save time and expenses with a hosted solution
- Enable centralized security within distributed organizations for remote offices and employees
- Implement as stand-alone or with on-premise Web security for a layered solution

Websense Hosted Web Security Is Available in Two Modules:

Web Filter

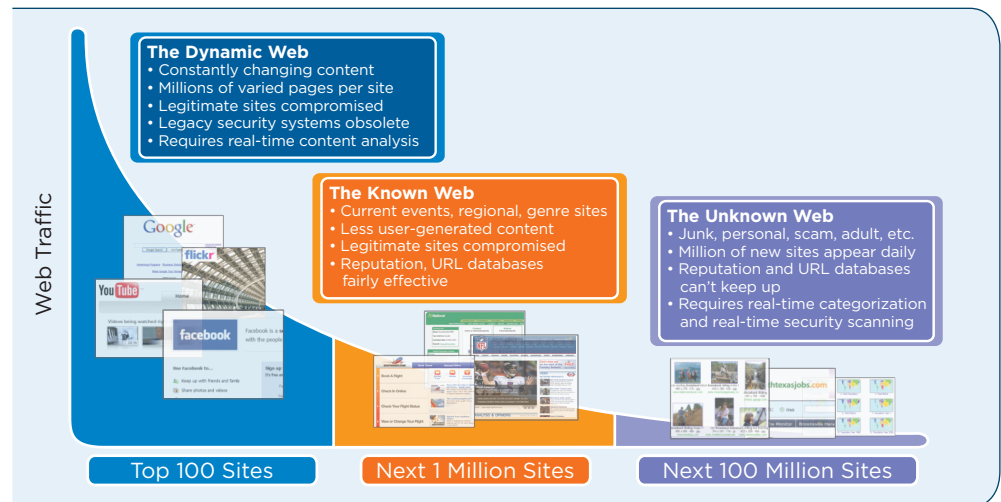

Web filtering provides comprehensive and accurate management of Internet usage, including filtering for productivity and bandwidth-draining Web sites. Through granular and configurable policies, organizations can set enforcements to manage employee Internet access, all through a centralized, secure interface for all users in any location. Even in complex, distributed environments or those with roaming users, managing Web usage policies is simple, scalable, and predictable, reducing business costs and network complexity.

Web Protection

Web protection provides zero-hour security against blended and Web-based threats such as viruses, Trojan horses, worms, spyware, and other forms of malware by processing all Web content, including webmail, through the Websense service to remove malicious code before it reaches the network. Using a combination of commercial antivirus scanning, the Websense ThreatSeeker™ Network, and correlated heuristics, Websense provides the best Web protection available today. And because the protection is hosted and centralized, securing the network environment and business assets is easier than ever.

Benefits

- Protects against Web-based threats including viruses, Trojan horses, worms and phishing attacks
- Prevents lost productivity through unauthorized or excessive employee Web usage
- Safeguards employees from illegal or inappropriate Web content
- Reduces the complexity of managing Web security in distributed or growing environments and for mobile users
- Reduces costs by optimizing network bandwidth availability
- Eliminates the risk and uncertainty of managing a solution onsite
- Provides transparency to the end user with no noticeable latency
- Integrates with Active Directory for seamless user-based policies and reporting
- Handles mobile users with ease without requiring client-based software

The Web security landscape is changing: heavily-trafficked sites contain the most dynamic content, which bypasses most legacy security systems.
